

FIS INSURANCE RISK SUITE – GI EDITION

Formerly Prophet GI

A complete solution for general insurance risk management and modeling

Non-life insurance companies must build strong business strategies if they want to succeed in today's competitive market. But with limited resources, you must also meet the demands of regulators, management and boards for better forecasting and control of risk and capital. And you need to do all of that quickly.

FIS® Insurance Risk Suite – GI Edition (formerly Prophet GI)

gives you a complete solution for general/P&C insurers for risk management and modeling on premise or in the cloud.

With pre-built actuarial libraries, you can meet all of your risk modeling and business planning needs, including capital modeling, reserving calculations, pricing and financial reporting at the portfolio and individual contract level.

Streamline operations

Meet all your risk management and regulatory reporting needs more efficiently.

Reduce risk

Improve end-to-end control over your data while minimizing opportunities for manual error.

Improve understanding

Increase and share insights into risk metrics and analytics with business intelligence visualizations.

FIS INSURANCE RISK SUITE – GI EDITION

A complete solution for general insurance risk management and modeling

Build and run models faster

Insurance Risk Suite – GI Edition allows you to deliver simple or complex models out of the box within a rapid development environment. It features sophisticated tools for deterministic or full stochastic reserving and capital modeling. And its high-performance computing will produce results quickly – even on a single machine.

Govern risk management processes

For total confidence in the results, you can manage the overall risk modeling process and its underlying data with less reliance on spreadsheets. At the same time, Insurance Risk Suite – GI Edition increases your efficiency, transparency, auditability and control. In the case of reserving this is further enhanced with the provision of the General Insurance Reserving Interface.

Integrate external models

With the ability to seamlessly import economic scenario and catastrophe data from any of the main providers, you can easily apply existing processes and standards to build unified business models.

Report effectively

Generate outputs for financial statements, profit distributions, analysis of claims, business plans, capital allocation, business unit and risk performance measurement, capital models and claims reserves.

Consolidate your systems

Composite insurers can use the solution as a single modeling platform for all life and non-life lines of business. With centralized coding, common data paradigms and consistent treatment of assets, you can reduce overall costs, simplify maintenance and data management, and gain a more complete, coherent view of risk.

“We were particularly impressed with Insurance Risk Suite’s completeness of offering across actuarial modelling, data management, reporting and accounting.”

Mohan J. Varghese, Chief financial officer,
Saudi Arabian Cooperative Insurance Company
